

EURO-SEEDING® NATUROC®

SUPPLIES

Integration
of rocky/
concrete
zones

PRODUCT DESCRIPTION

NATUROC® processes are the result of applied research and are used to integrate rock and concrete support walls into the landscape by application of a permanent patina. NATUROC® instantly colours the medium through impregnation, giving the impression of fifty years of natural ageing. The components used are non-toxic for fauna or flora.

USE GUIDELINES

NATUROC® processes are intended for companies responsible for the visual integration of non-fertile mineral zones and they guarantee matching of the components used with site application conditions.

They combine technical assistance, the supply of the components and offer:

- ▶ **On-site assistance from an ecologist** to determine the feasibility and application conditions for the treatment.
- ▶ **The collection of samples** for testing to determine the type of patina and application doses required.
- ▶ **The choice of treatment** (brown, grey, ochre) in conformity with standard X31-210.
- ▶ **Determination of the application method.**
- ▶ **A quality process based on ISO standards.**
- ▶ **Assistance for application.**

NATUROC® processes have been used in the framework of territorial development in France and internationally, in particular in the following situations:

- ▶ **Integration of working faces** in the extraction sector (open cast mining, quarries).
- ▶ **Integration of rock-fills** (drainage curtains, riprap, water courses).
- ▶ **Integration of concrete structures** (tunnel heads, safety walls, shotcrete).

DOSAGE AND PACKAGING

According to the research in situ – consult us.
